

The WATER DECONTAMINATOR

Patent and Patents Pending

Catch Basin Insert

www.wdfilters.com

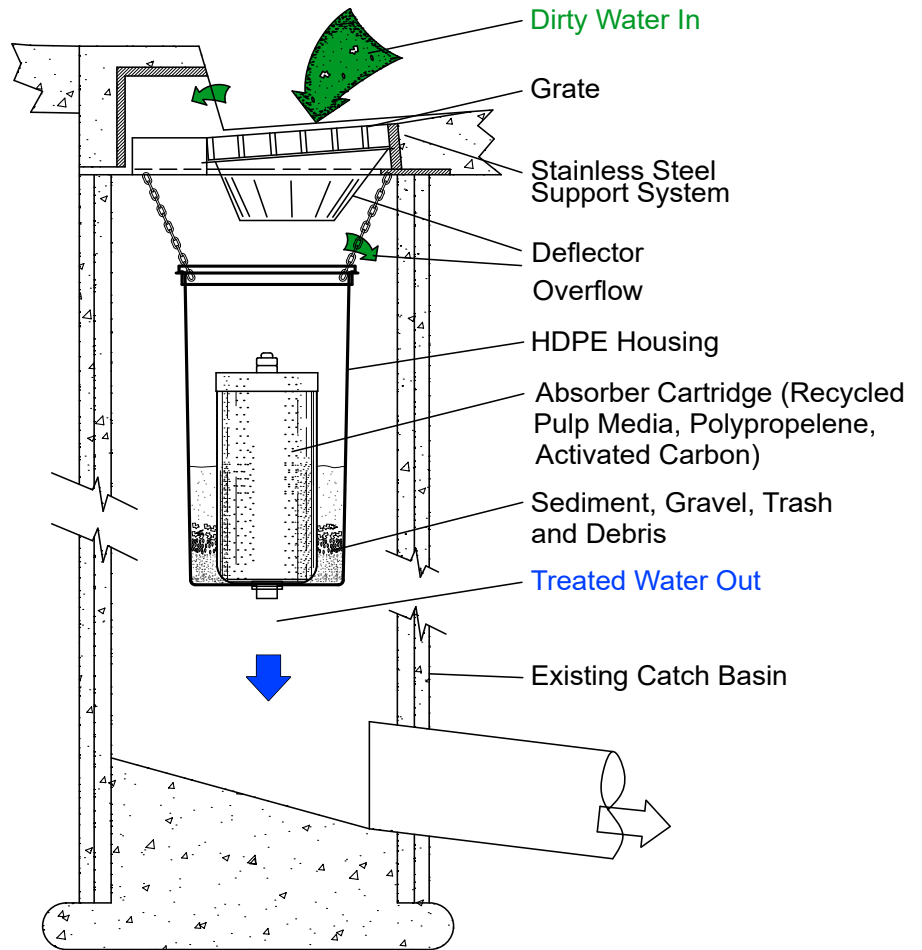

The Water Decontaminator is a patented, environmental product that is placed under a catch basin grate to help remove sediment, oil and contaminants from dirty water. Oil and contaminants are captured in a disposable cartridge. The absorber cartridge uses recycled waste products, essentially fighting pollution with pollution. An above grade Water Decontaminator is also available.

Applications include removal of oil and contaminants from water run-off sources:

- * Urban run-off
- * Roadways
- * Parking lots
- * Oil & fuel spills
- * Military bases
- * Airports
- * Industrial sites
- * Manufacturing plants
- * Maintenance areas
- * Sumps
- * Fire water run-off
- * Equipment wash-down

Cleans parking lot run-off, catch basins, ponds, sumps and spills. Cleans dirty water run-off by separating dirt, debris and other solids into a sediment trap. Oils and chemicals are absorbed in a disposable cartridge.

The Water Decontaminator is engineered and patented for the treatment of stormwater run off. We design our filters to meet or exceed stormwater best management practices (BMP's) and best available technology (BAT). Please visit our website for more information: www.WDfilters.com
